

Assignment (Laravel + React CMS)

Technology Requirements

- **Laravel 12** (mandatory)
 - **PHP 8.2+**
 - **MySQL/PostgreSQL**
 - **React 18+**
 - **Blade** for public website templates
-

Project Overview

Build a mini Content Management System (CMS) where:

1. Public Website (Laravel 12 + Blade)

- Home page
- Blog listing
- Blog detail
- Static pages (About, Contact, etc.)

2. Admin Panel (React)

- Authentication using Laravel 12 API
- CRUD for:
 - Posts
 - Pages
 - Media uploads
- Publish/unpublish toggle
- Dashboard with content stats

3. Backend API (Laravel 12)

Laravel 12 will provide REST APIs consumed by the React admin panel.

Detailed Requirements

A. Laravel 12 Backend

Models

- User
- Post
- Page
- Category (optional)
- Media (optional)

Features

- Authentication
- Form Requests for validation
- API Resources for JSON output
- Slug generation for SEO URLs
- Policies for admin access
- Store images in storage/app/public

APIs to Implement

Feature	Endpoint
Login	POST /api/login
Logout	POST /api/logout
Authenticated User	GET /api/me
Posts CRUD	/api/posts
Pages CRUD	/api/pages
Media Upload	POST /api/media/upload
Publish/Unpublish	PATCH /api/posts/{id}/publish

B. React Admin Panel

Pages

- Login

- Dashboard
- Posts (List, Create, Edit, Delete)
- Pages (List, Create, Edit, Delete)
- Media Manager
- Logout

Technical Guidelines

- Use React Router
 - State management: Redux Toolkit or Context API
 - Use WYSIWYG editor (Quill, TinyMCE, etc.)
 - File upload integration with Laravel API
 - Protected routes after login
-

C. Public Website (Laravel 12 + Blade)

Pages

- Home (latest posts)
 - Blog listing
 - Blog details
 - Dynamic Pages (/{{slug}})
 - Global layout with header & footer
 - SEO-friendly meta tags
-

D. Bonus Tasks

- Role/Permission system
- Search functionality
- Categories & tags
- Media library with folder support
- Comments on posts
- Caching for faster performance

Deliverables

Candidate must submit:

- GitHub repo with two folders:
 - /backend → Laravel project
 - /admin → React project
- README with setup steps
- .env example
- DB migrations or SQL dump
- (Optional) Video walkthrough
